THE APPLICATION IDENTIFIED ABOVE HAS BEEN EXAMINED AND IS ALLOWED FOR ISSUANCE AS A PATENT. **PROSECUTION ON THE MERITS IS CLOSED.** THIS NOTICE OF ALLOWANCE IS NOT A GRANT OF PATENT RIGHTS. THIS APPLICATION IS SUBJECT TO WITHDRAWAL FROM ISSUE AT THE INITIATIVE OF THE OFFICE OR UPON PETITION BY THE APPLICANT. SEE 37 CFR 1.313 AND MPEP 1308.

THE ISSUE FEE AND PUBLICATION FEE (IF REQUIRED) MUST BE PAID WITHIN **THREE MONTHS** FROM THE MAILING DATE OF THIS NOTICE OR THIS APPLICATION SHALL BE REGARDED AS ABANDONED. **THIS STATUTORY PERIOD CANNOT BE EXTENDED.** SEE 35 U.S.C. 151. THE ISSUE FEE DUE INDICATED ABOVE DOES NOT REFLECT A CREDIT FOR ANY PREVIOUSLY PAID ISSUE FEE IN THIS APPLICATION. IF AN ISSUE FEE HAS PREVIOUSLY BEEN PAID IN THIS APPLICATION (AS SHOWN ABOVE), THE RETURN OF PART B OF THIS FORM WILL BE CONSIDERED A REQUEST TO REAPPLY THE PREVIOUSLY PAID ISSUE FEE TOWARD THE ISSUE FEE NOW DUE.

HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

If the SMALL ENTITY is shown as NO:

A. Pay TOTAL FEE(S) DUE shown above, or

B. If applicant claimed SMALL ENTITY status before, or is now claiming SMALL ENTITY status, check box 5a on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and 1/2 the ISSUE FEE shown above.

II. PART B - FEE(S) TRANSMITTAL, or its equivalent, must be completed and returned to the United States Patent and Trademark Office (USPTO) with your ISSUE FEE and PUBLICATION FEE (if required). If you are charging the fee(s) to your deposit account, section "4b" of Part B - Fee(s) Transmittal should be completed and an extra copy of the form should be submitted. If an equivalent of Part B is filed, a request to reapply a previously paid issue fee must be clearly made, and delays in processing may occur due to the difficulty in recognizing the paper as an equivalent of Part B.

III. All communications regarding this application must give the application number. Please direct all communications prior to issuance to Mail Stop ISSUE FEE unless advised to the contrary.

IMPORTANT REMINDER: Utility patents issuing on applications filed on or after Dec. 12, 1980 may require payment of maintenance fees. It is patentee's responsibility to ensure timely payment of maintenance fees when due.

DETAILED ACTION

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

2. Authorization for this examiner's amendment was given in a telephone interview with Attorney of record Marvin L. Beekman on 12/16/2008.

3. The application has been amended as follows:

Claim 2 has been changed as follows:

--2. A communication system, comprising:

an antenna with a resonant circuit, the resonant circuit including an inductive coil connected to a tuning capacitor;

means to selectively drive the resonant circuit during a transmit mode;

means to selectively receive an induced signal in the resonant circuit during a receive mode; and

means to selectively include a frequency shift canceling component in the resonant circuit to provide a first resonance frequency in the resonant circuit in the transmit mode and a second resonance frequency in the resonant circuit in the receive mode such that the first resonance frequency and the second resonance frequency are

approximately equal, wherein the means to selectively include a frequency shift canceling component in the resonant circuit includes means to selectively exclude a predetermined parallel capacitance with respect to the tuning capacitor when switching from the receive mode to the transmit mode, and to selectively include the predetermined parallel capacitance with respect to the tuning capacitor when switching from the transmit mode to the receive mode. --

Claim 3 has been changed as follows:

--3. A communication system, comprising:

an antenna with a resonant circuit, the resonant circuit including an inductive coil connected to a tuning capacitor;

means to selectively drive the resonant circuit during a transmit mode;

means to selectively receive an induced signal in the resonant circuit during a receive mode; and

means to selectively include a frequency shift canceling component in the resonant circuit to provide a first resonance frequency in the resonant circuit in the transmit mode and a second resonance frequency in the resonant circuit in the receive mode such that the first resonance frequency and the second resonance frequency are approximately equal, wherein the means to selectively include a frequency shift canceling component in the resonant circuit includes means to selectively include a predetermined series capacitance with respect to the tuning capacitor when switching from the receive mode to the transmit mode, and to selectively exclude the

predetermined series capacitance with respect to the tuning capacitor when switching from the transmit mode to the receive mode. --

Claim 4 has been changed as follows:

--4. A communication system, comprising:

an antenna with a resonant circuit, the resonant circuit including an inductive coil connected to a tuning capacitor;

means to selectively drive the resonant circuit during a transmit mode;

means to selectively receive an induced signal in the resonant circuit during a receive mode; and

means to selectively include a frequency shift canceling component in the resonant circuit to provide a first resonance frequency in the resonant circuit in the transmit mode and a second resonance frequency in the resonant circuit in the receive mode such that the first resonance frequency and the second resonance frequency are approximately equal, wherein the means to selectively include a frequency shift canceling component in the resonant circuit includes means to selectively exclude a predetermined inductance from the resonant circuit of the antenna when switching from the receive mode to the transmit mode, and to selectively include the predetermined inductance from the resonant circuit of the antenna when switching from the transmit mode to the receive mode. --

Claims 1 and 21 has been changed as follows:

Claims 1 and 21 are cancelled.

Claim 27 has been changed as follows:

In claim 27, line 1, after "claim", replace "1" with -- 2 --.

(END of AMENDMENT)

REASONS FOR ALLOWANCE

4. Claims 2-20 and 22-31 are allowed over the prior art of record.
5. The following is an examiner's statement of reasons for allowance:

The applicant's Remarks, filed on 07/18/2008, have been carefully reviewed with update search. Consequently, reasons for allowance of claims 5-20, 22-26, and 28-29 are set forth in according to the applicant's remarks stated on pages 15-16.

Regarding claim 2, the prior art made of record fails to clearly teach or fairly suggest the features of means to selectively include a frequency shift canceling component in the resonant circuit to provide a first resonance frequency in the resonant circuit in the transmit mode and a second resonance frequency in the resonant circuit in the receive mode such that the first resonance frequency and the second resonance frequency are approximately equal, wherein the means to selectively include a frequency shift canceling component in the resonant circuit includes means to selectively exclude a predetermined parallel capacitance with respect to the tuning

capacitor when switching from the receive mode to the transmit mode, and to selectively include the predetermined parallel capacitance with respect to the tuning capacitor when switching from the transmit mode to the receive mode, in combination with other limitations, as specified in the independent claim 2, and further limitations of their respective dependent claims 27.

Regarding claim 3, the prior art made of record fails to clearly teach or fairly suggest the features of means to selectively include a frequency shift canceling component in the resonant circuit to provide a first resonance frequency in the resonant circuit in the transmit mode and a second resonance frequency in the resonant circuit in the receive mode such that the first resonance frequency and the second resonance frequency are approximately equal, wherein the means to selectively include a frequency shift canceling component in the resonant circuit includes means to selectively include a predetermined series capacitance with respect to the tuning capacitor when switching from the receive mode to the transmit mode, and to selectively exclude the predetermined series capacitance with respect to the tuning capacitor when switching from the transmit mode to the receive mode, in combination with other limitations, as specified in the independent claim 3.

Regarding claim 4, the prior art made of record fails to clearly teach or fairly suggest the features of means to selectively include a frequency shift canceling component in the resonant circuit to provide a first resonance frequency in the resonant

circuit in the transmit mode and a second resonance frequency in the resonant circuit in the receive mode such that the first resonance frequency and the second resonance frequency are approximately equal, wherein the means to selectively include a frequency shift canceling component in the resonant circuit includes means to selectively exclude a predetermined inductance from the resonant circuit of the antenna when switching from the receive mode to the transmit mode, and to selectively include the predetermined inductance from the resonant circuit of the antenna when switching from the transmit mode to the receive mode, in combination with other limitations, as specified in the independent claim 4.

Regarding claim 30, the prior art made of record fails to clearly teach or fairly suggest the features of means to selectively include a frequency shift canceling component in the resonant circuit to provide a first resonance frequency in the resonant circuit in the transmit mode and a second resonance frequency in the resonant circuit in the receive mode such that the first resonance frequency and the second resonance frequency are approximately equal, wherein the means to selectively include a frequency shift canceling component in the resonant circuit includes means to selectively exclude a predetermined inductance from the resonant circuit of the antenna when switching from the receive mode to the transmit mode, and to selectively include the predetermined inductance from the resonant circuit of the antenna when switching from the transmit mode to the receive mode, in combination with other limitations, as

specified in the independent claim 30, and further limitations of their respective dependent claims 31.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
